

Public Mask Dispenser

CONCEPT

During the time of Covid-19, a public mask dispenser encourages safe and respectful social use of outdoor places by providing free protective masks. The sensor-activated mask dispenser allows people to receive their mask without touching the device.

In our shared public landscape civic agencies provide amenities (park benches, artworks, plantings, dog clean-up bags) that support and encourage active use of public space.

In this spirit, the Public Mask Dispenser is an essential element and contribution to safe enjoyment of our shared public space.

DESCRIPTION

The Public Mask Dispenser contains a custom single-mask delivery mechanism housed within the sculptural shape.

The curve design is inspired by the outline of a mask and a clover form, the flat and curved surfaces are available for custom text and decorative illustration.

The durable structure is made of powder coated steel. Base plate allows for installation on the sidewalk, or footing in a landscape.
